How to Read the Grade Level Content Standards

Standards define what students should understand and be able to do.

Clusters are groups of related standards. Note that standards from different clusters may sometimes be closely related, because mathematics is a connected subject.

Domains are larger groups of related standards. Standards from different domains may sometimes be closely related.

Standards for Mathematical Practice

The Standards for Mathematical Practice describe varieties of expertise that mathematics educators at all levels should seek to develop in their students. These practices rest on important “processes and proficiencies” with longstanding importance in mathematics education. The first of these are the NCTM process standards of problem solving, reasoning and proof, communication, representation, and connections. The second are the strands of mathematical proficiency specified in the National Research Council’s report *Adding It Up*: adaptive reasoning, strategic competence, conceptual understanding (comprehension of mathematical concepts, operations and relations), procedural fluency (skill in carrying out procedures flexibly, accurately, efficiently and appropriately), and productive disposition (habitual inclination to see mathematics as sensible, useful, and worthwhile, coupled with a belief in diligence and one’s own efficacy).

1. Make sense of problems and persevere in solving them.

Mathematically proficient students start by explaining to themselves the meaning of a problem and looking for entry points to its solution. They analyze givens, constraints, relationships, and goals. They make conjectures about the form and meaning of the solution and plan a solution pathway rather than simply jumping into a solution attempt. They consider analogous problems, and try special cases and simpler forms of the original problem in order to gain insight into its solution. They monitor and evaluate their progress and change course if necessary. Older students might, depending on the context of the problem, transform algebraic expressions or change the viewing window on their graphing calculator to get the information they need. Mathematically proficient students can explain correspondences between equations, verbal descriptions, tables, and graphs or draw diagrams of important features and relationships, graph data, and search for regularity or trends. Younger students might rely on using concrete objects or pictures to help conceptualize and solve a problem. Mathematically proficient students check their answers to problems using a different method, and they continually ask themselves, “Does this make sense?” They can understand the approaches of others to solving complex problems and identify correspondences between different approaches.

2. Reason abstractly and quantitatively.

Mathematically proficient students make sense of quantities and their relationships in problem situations. They bring two complementary abilities to bear on problems involving quantitative relationships: the ability to *decontextualize*—to abstract a given situation and represent it symbolically and manipulate the representing symbols as if they have a life of their own, without necessarily attending to their referents—and the ability to *contextualize*, to pause as needed during the manipulation process in order to probe into the referents for the symbols involved. Quantitative reasoning entails habits of creating a coherent representation of the problem at hand; considering the units involved; attending to the meaning of quantities, not just how to compute them; and knowing and flexibly using different properties of operations and objects.

3. Construct viable arguments and critique the reasoning of others.

Mathematically proficient students understand and use stated assumptions, definitions, and previously established results in constructing arguments. They make conjectures and build a logical progression of statements to explore the truth of their conjectures. They are able to analyze situations by breaking them into cases, and can recognize and use counterexamples. They justify their conclusions, communicate them to others, and respond to the arguments of others. They reason inductively about data, making plausible arguments that take into account the context from which the data arose. Mathematically proficient students are also able to compare the effectiveness of two plausible arguments, distinguish correct logic or reasoning from that which is flawed, and—if there is a flaw in an argument—explain what it is. Elementary students can construct arguments using concrete referents such as objects, drawings, diagrams, and actions. Such arguments can make sense and be correct, even though they are not generalized or made formal until later grades. Later, students learn to determine domains to which an argument applies. Students at all grades can listen or read the arguments of others, decide whether they make sense, and ask useful questions to clarify or improve the arguments.

4. Model with mathematics.

Mathematically proficient students can apply the mathematics they know to solve problems arising in everyday life, society, and the workplace. In early grades, this might be as simple as writing an addition equation to describe a situation. In middle grades, a student might apply proportional reasoning to plan a school event or analyze a problem in the community. By high school, a student might use geometry to solve a design problem or use a function to describe how one quantity of interest depends on another. Mathematically proficient students who can apply what they know are comfortable making assumptions and approximations to simplify a complicated situation, realizing that these may need revision later. They are able to identify important quantities in a practical situation and map their relationships using such tools as diagrams, two-way tables, graphs, flowcharts and formulas. They can analyze those relationships mathematically to draw conclusions. They routinely interpret their mathematical results in the context of the situation and reflect on whether the results make sense, possibly improving the model if it has not served its purpose.

5. Use appropriate tools strategically.

Mathematically proficient students consider the available tools when solving a mathematical problem. These tools might include pencil and paper, concrete models, a ruler, a protractor, a calculator, a spreadsheet, a computer algebra system, a statistical package, or dynamic geometry software. Proficient students are sufficiently familiar with tools appropriate for their grade or course to make sound decisions about when each of these tools might be helpful, recognizing both the insight to be gained and their limitations. For example, mathematically proficient high school students analyze graphs of functions and solutions generated using a graphing calculator. They detect possible errors by strategically using estimation and other mathematical knowledge. When making mathematical models, they know that technology can enable them to visualize the results of varying assumptions, explore consequences, and compare predictions with data. Mathematically proficient students at various grade levels are able to identify relevant external mathematical resources, such as digital content located on a website, and use them to pose or solve problems. They are able to use technological tools to explore and deepen their understanding of concepts.

6. Attend to precision.

Mathematically proficient students try to communicate precisely to others. They try to use clear definitions in discussion with others and in their own reasoning. They state the meaning of the symbols they choose, including using the equal sign consistently and appropriately. They are careful about specifying units of measure, and labeling axes to clarify the correspondence with quantities in a problem. They calculate accurately and efficiently, express numerical answers with a degree of precision appropriate for the problem context. In the elementary grades, students give carefully formulated explanations to each other. By the time they reach high school they have learned to examine claims and make explicit use of definitions.

7. Look for and make use of structure.

Mathematically proficient students look closely to discern a pattern or structure. Young students, for example, might notice that three and seven more is the same amount as seven and three more, or they may sort a collection of shapes according to how many sides the shapes have. Later, students will see 7×8 equals the well remembered $7 \times 5 + 7 \times 3$, in preparation for learning about the distributive property. In the expression $x^2 + 9x + 14$, older students can see the 14 as 2×7 and the 9 as $2 + 7$. They recognize the significance of an existing line in a geometric figure and can use the strategy of drawing an auxiliary line for solving problems. They also can step back for an overview and shift perspective. They can see complicated things, such as some algebraic expressions, as single objects or as being composed of several objects. For example, they can see $5 - 3(x - y)^2$ as 5 minus a positive number times a square and use that to realize that its value cannot be more than 5 for any real numbers x and y .

8. Look for and express regularity in repeated reasoning.

Mathematically proficient students notice if calculations are repeated, and look both for general methods and for shortcuts. Upper elementary students might notice when dividing 25 by 11 that they are repeating the same calculations over and over again, and conclude they have a repeating decimal. By paying attention to the calculation of slope as they repeatedly check whether points are on the line through $(1, 2)$ with slope 3, middle school students might abstract the equation $(y - 2)/(x - 1) = 3$. Noticing the regularity in the way terms cancel when expanding $(x - 1)(x + 1)$, $(x - 1)(x^2 + x + 1)$, and $(x - 1)(x^3 + x^2 + x + 1)$ might lead them to the general formula for the sum of a geometric series. As they work to solve a problem, mathematically proficient students maintain oversight of the process, while attending to the details. They continually evaluate the reasonableness of their intermediate results.

Kindergarten Mathematics Curriculum Map

Granite School District Scope and Sequence Overview

Unit of Study	Go Math! Alignment	Go Math! Chapter Title	Domain and Standards
1	Chapter 1	Represent, Count, and Write Numbers 0 to 5	Domain: Counting and Cardinality Standards: 3, 4a, 4b, 4c Domain: Operations and Algebraic Thinking Standard: 3
2	Chapter 2	Compare Numbers to 5	Domain: Counting and Cardinality Standard: 6
3	Chapter 3	Represent, Count, and Write Numbers 6 to 9	Domain: Counting and Cardinality Standards: 3, 5, 6
4	Chapter 4	Represent and Compare Numbers to 10	Domain: Counting and Cardinality Standards: 2, 3, 5, 6, 7 Operations and Algebraic Thinking Standard: 4
5	Chapter 5	Addition	Domain: Operations and Algebraic Thinking Standards: 1, 2, 3, 4, 5
6	Chapter 6	Subtraction	Domain: Operations and Algebraic Thinking Standards: 1, 2, 5
7	Chapter 7	Represent, Count, and Write 11 to 19	Domain: Counting and Cardinality Standard: 3 Domain: Number and Operations in Base Ten Standard: 1
8	Chapter 8	Represent, Count, and Write 20 and Beyond	Domain: Counting and Cardinality Standards: 1, 2, 3, 5, 6
9	Chapter 9	Identify and Describe Two-Dimensional Shapes	Domain: Geometry Standards: 2, 4, 6
10	Chapter 10	Identify and Describe Three-Dimensional Shapes	Domain: Geometry Standards: 1, 2, 3, 4
11	Chapter 11	Measurement	Domain: Measurement and Data Standards: 1, 2
12	Chapter 12	Classify and Sort Data	Domain: Measurement and Data Standard: 3

Kindergarten Instruction and Assessment* Schedule 2014-2015

It is expected that the units will be taught consecutively. The table below reflects which units are assessed on each benchmark.

Approx. Number of Days of Instruction	Pre/Post Inventory 8/25 – 8/29	13	8	12	Benchmark 1 Posttest 8/25 – 10/30	10	15	10	Benchmark 2 Posttest 11/3 – 1/15	13	11	15	Benchmark 3 Posttest 1/20 – 3/19	12	8	9	Benchmark 4 Posttest 3/23 – 6/5	Pre/Post Inventory 6/1 – 6/5	End of Year
Instructional Content		Unit of Study 1	Unit of Study 2	Unit of Study 3		Unit of Study 4	Unit of Study 5	Unit of Study 6		Unit of Study 7	Unit of Study 8	Unit of Study 9		Unit of Study 10	Unit of Study 11	Unit of Study 12			Getting Ready for Gr. 1 Unit
Assessment		Ch. 1 Test	Ch. 2 Test	Ch. 3 Test		Ch. 4 Test	Ch. 5 Test	Ch. 6 Test		Ch. 7 Test	Ch. 8 Test	Ch. 9 Test		Ch. 10 Test	Ch. 11 Test	Ch. 12 Test			

*Kindergarten Pre/Post Inventory and Benchmark Tests are required by GSD. Additional assessment options are on each Unit of Study in the GSD maps.

Kindergarten Mathematics Curriculum Map - Overview

Lesson Plan Format:

Lesson Plan Format with Go Math! References:

Unit of Study	The mathematical content is sequenced in Units of Study that will take approximately 2-3 weeks each to teach. The sequence of Units of Study provides a coherent flow to mathematics instruction throughout the year.
Go Math! Alignment	The primary textbook adopted in Granite School District for Grades K-6 is Houghton Mifflin Harcourt's Go Math!, 2012 Edition.
Math Content and Language Objectives	The Math Content and Language Objectives are to be posted for each lesson, restated to students during the lesson, and revisited at the end of each lesson. These are written as "I Can" statements.
Key Concepts for Differentiation 🔑	In an effort to assist teachers in the process of differentiation in Tier I teaching, key concepts have been identified in the curriculum maps as those specific objectives a teacher would focus on during small group instruction with struggling students. Key concepts cover minimum, basic skills and knowledge every student must master. Key concepts are NOT an alternative to teaching the entire Utah State Core Standards, rather they emphasize which concepts to prioritize for differentiation.
Vocabulary	Vocabulary cards for instruction and word walls can be found at: http://www.graniteschools.org/depart/teachinglearning/curriculuminstruction/math/Pages/MathematicsVocabulary.aspx
Teacher's Resources and Notes	Teachers are encouraged to make notes of their own lesson ideas and resources that align with each Unit of Study.
Additional Resources	Each elementary school has a copy of <u>Elementary and Middle School Mathematics</u> , 7 th Edition, by John A. Van de Walle. This book is intended to be a resource for mathematical content and instructional strategy suggestions. The websites are a resource for lesson plans, teacher tutorials, content videos, student applets, and games. The resources are NOT intended to be all-inclusive. It is the teacher's responsibility to teach the Utah Core State Standards for Mathematics content, not the resources.
Assessment	There are many formative and summative assessment options: <ul style="list-style-type: none"> • Go Math! Options: Prerequisite Skills Inventory; Beginning-of-Year, Middle-of-Year, and End-of-Year Benchmark Tests; Show What You Know Diagnostic Assessments; Diagnostic Interview Assessments; Portfolio Assessment; Mid-Chapter Checkpoints; Chapter Review/Tests; Chapter Tests; Performance Assessments; Quick Checks; Soar to Success; and, Standards Practice Pages. The assessments are intended to be used to provide immediate feedback that can be used for Tier 2 and/or Tier 3 interventions for individual students. The results may also be used to identify concepts for reteaching the whole class if needed. • Benchmark Assessments – These are cumulative tests for multiple Units of Study. These are to be given as a pretest and a posttest. Scores from the Benchmark Assessments are to be reported to the district. Students not mastering content will need Tier 2 and/or Tier 3 interventions. • Exit slips, teacher observations, daily class work, homework, and basal assessments are to be used at the teacher's discretion to help guide and direct instruction.

Unit of Study 1	Kindergarten	Quarter 1	Approx. 13 days	GSD Math 8/25/14
-----------------	--------------	-----------	-----------------	------------------

Domain: Counting and Cardinality K.CC

Cluster: Know number names and the count sequence.

3. Write numbers from 0 to 20. Represent a number of objects with a written numeral 0-20 (with 0 representing a count of no objects).

Cluster: Count to tell the number of objects.

4. Understand the relationship between numbers and quantities; connect counting to cardinality.

a. When counting objects, say the number names in the standard order, pairing each object with one and only one number name and each number name with one and only one object.

b. Understand that the last number name said tells the number of objects counted. The number of objects is the same regardless of their arrangement or the order in which they were counted.

c. Understand that each successive number name refers to a quantity that is one larger.

Domain: Operations and Algebraic Thinking K.OA

Cluster: Understand addition as putting together and adding to, and understand subtraction as taking apart and taking from.

3. Decompose numbers less than or equal to 10 into pairs in more than one way, e.g., by using objects or drawings, and record each decomposition by a drawing or equation (e.g., $5 = 2 + 3$ and $5 = 4 + 1$).

Domain: GSD

1. Name days of week in order.

2. Identify ordinal numbers 1st - 5th.

Math Content Objectives	Vocabulary	Teacher's Resources and Notes

Let's Go Visiting by Sue Williams

Assessment Options

- **Go Math! Assessment Options:** Show What You Know Diagnostic Assessment; Mid-Chapter Checkpoint; Quick Checks; Portfolio Assessment; Chapter 3 Review/Test; Chapter 3 Test; Diagnostic Interview Assessment; Soar to Success; Standards Practice Pages.
- **Daily/Weekly Formative Assessment Options:** Exit Slips, Observation, Daily Work, Homework.

Unit of Study 4	Kindergarten	Quarter 2	Approx. 10 days	GSD Math 8/25/14
-----------------	--------------	-----------	-----------------	------------------

Domain: Counting and Cardinality	K.CC
---	------

Cluster: Know number names and the count sequence.
 2. Count forward beginning from a given number within the known sequence (instead of having to begin at 1).
 3. Write numbers from 0 to 20. Represent a number of objects with a written numeral 0-20 (with 0 representing a count of no objects).

Cluster: Count to tell the number of objects.
 5. Count to answer “how many?” questions about as many as 20 things arranged in a line, a rectangular array, or a circle, or as many as 10 things in a scattered configuration; given a number from 1–20, count out that many objects.

Cluster: Compare numbers.
 6. Identify whether the number of objects in one group is greater than, less than, or equal to the number of objects in another group, e.g., by using matching and counting strategies.¹
¹Include groups with up to ten objects.
 7. Compare two numbers between 1 and 10 presented as written numerals.

Domain: Operations and Algebraic Thinking	K.OA
--	------

Cluster: Understand addition as putting together and adding to, and understand subtraction as taking apart and taking from.
 4. For any number from 1 to 9, find the number that makes 10 when added to the given number, e.g., by using objects or drawings, and record the answer with a drawing or equation.

Math Content Objectives	Vocabulary	Teacher’s Resources and Notes
<p>I can:</p> <p><u>K.CC.2</u></p> <ul style="list-style-type: none"> • Count forward from any number. <p><u>K.CC.3</u></p> <ul style="list-style-type: none"> • Write numbers. • Count objects and write the number. (Up to 9 - 1st Quarter) (Up to 10 - 2nd Quarter) (Up to 20 - 3rd Quarter) 	<ul style="list-style-type: none"> • and • compare • count • decompose • digit • eight • equal • fewer • five • four • greater than • larger • less than 	

Unit of Study 4 (continued)

Math Content Objectives	Vocabulary	Teacher's Resources and Notes
<p><u>K.CC.5</u> ○→ Count and tell “How Many?” are in a group. Arrangements - Linear, Array or Circle (Up to 9 - 1st Quarter) (Up to 10 - 2nd Quarter) (Up to 20 - 3rd Quarter)</p> <p>Arrangement – Scattered (Up to 9 - 1st Quarter) (Up to 10 - 2nd Quarter) (Up to 10 - 2nd Quarter)</p> <ul style="list-style-type: none"> • Show a number with objects. (Up to 9 - 1st Quarter) (Up to 10 - 2nd Quarter) (Up to 20 - 3rd Quarter) <p><u>K.CC.6</u> ○→ Tell if one group is greater than, less than, or equal to another group. (Up to 5 - 1st Quarter) (Up to 10 - 2nd Quarter)</p> <p><u>K.CC.7</u> ○→ Compare two written numbers and find the one that is greater. ○→ Compare two written numbers and find the one that is less. (Numbers 1-5 - 1st Quarter) (Numbers 1-10 - 2nd Quarter)</p>	<ul style="list-style-type: none"> • make ten • match • more • nine • number • number pair • numeral • object • one • same • seven • six • ten • three • two 	

Unit of Study 4 (continued)

Math Content Objectives	Vocabulary	Teacher's Resources and Notes
<p><u>K.OA.4</u></p> <ul style="list-style-type: none">○→ Show how to make ten starting at a smaller number.• Show an answer with a drawing.• Write an answer with an equation. <p>○→ Key Concepts for Differentiation - See p. 8.</p>		
<p>Math Language Objectives</p>		
<p><i>[Note: The following language objectives must be written in student-friendly terms, adapted to specific lessons, and aligned with the language needs of students.]</i></p> <p>Reading Standards for Informational Text</p> <ul style="list-style-type: none">• Ask and answer questions about key details in a math text.• Describe the connection between ideas or information in a math text.• Ask and answer questions about unknown math words in a text.• Describe the relationship between pictures and text.• Identify basic similarities and differences between images and texts on the same math topic.• Engage in group reading activities of math texts.		

Unit of Study 4 (continued)

Math Language Objectives	Vocabulary	Teacher's Resources and Notes
<p>Writing Standards</p> <ul style="list-style-type: none">• Use a combination of drawing, dictating, and writing to compose opinion pieces on math topics.• Use a combination of drawing, dictating, and writing to compose explanatory texts, providing some information on a math topic.• Use digital tools to produce math writing and collaborate with others.• Participate in math writing projects. <p>Speaking and Listening Standards</p> <ul style="list-style-type: none">• Participate in collaborative conversations about math topics.• Ask and answer questions about key details or information presented orally or through other media.• Ask and answer questions in order to seek help, get information, or clarify something that is not understood.• Add drawings to math descriptions to provide detail.• Speak audibly and express math ideas clearly.

Unit of Study 5	Kindergarten	Quarter 2	Approx. 15 days	GSD Math 8/25/14
Domain: Operations and Algebraic Thinking				K.OA
Cluster: Understand addition as putting together and adding to, and understand subtraction as taking apart and taking from.				
1. Represent addition and subtraction with objects, fingers, mental images, drawings ² , sounds (e.g., claps), acting out situations, verbal explanations, expressions, or equations.				
² Drawings need not show details, but should show the mathematics in the problem. (This applies wherever drawings are mentioned in the Standards.)				
2. Solve addition and subtraction word problems, and add and subtract within 10, e.g., by using objects or drawings to represent the problem.				
3. Decompose numbers less than or equal to 10 into pairs in more than one way, e.g., by using objects or drawings, and record each decomposition by a drawing or equation (e.g., $5 = 2 + 3$ and $5 = 4 + 1$).				
4. For any number from 1 to 9, find the number that makes 10 when added to the given number, e.g., by using objects or drawings, and record the answer with a drawing or equation.				
5. Fluently add and subtract within 5.				
Math Content Objectives	Vocabulary	Teacher's Resources and Notes		
<p>I can:</p> <p><u>K.OA.1</u></p> <ul style="list-style-type: none"> • Can add using <u>objects</u>. (Substitute in strategies as they are used: fingers, mental images, drawings, sounds, acting out situations, verbal explanations, expressions, equations.) • Can subtract using <u>objects</u>. (Substitute in strategies as they are used: fingers, mental images, drawings, sounds, acting out situations, verbal explanations, expressions, equations.) <p><u>K.OA.2</u></p> <ul style="list-style-type: none"> • Can use objects to solve addition story problems. • Can use drawings to solve addition story problems. • Can use objects to solve subtraction story problems. • Can use drawings to solve subtraction story problems. 	<ul style="list-style-type: none"> • add • addend • and • count on • decompose • eight • equal • equation • expression • five • four • make ten • nine • number pair • object • one • plus 			

Unit of Study 5 (continued)

Unit of Study 7	Kindergarten	Quarter 3	Approx. 13 days	GSD Math 8/25/14
Domain: Counting and Cardinality				K.CC
Cluster: Know number names and the count sequence.				
3. Write numbers from 0 to 20. Represent a number of objects with a written numeral 0-20 (with 0 representing a count of no objects).				
Domain: Number and Operations in Base Ten				K.NBT
Cluster: Work with numbers 11–19 to gain foundations for place value.				
1. Compose and decompose numbers from 11 to 19 into ten ones and some further ones, e.g., by using objects or drawings, and record each composition or decomposition by a drawing or equation (e.g., $18 = 10 + 8$); understand that these numbers are composed of ten ones and one, two, three, four, five, six, seven, eight, or nine ones.				
Math Content Objectives	Vocabulary		Teacher's Resources and Notes	
<p>I can:</p> <p><u>K.CC.3</u></p> <ul style="list-style-type: none"> • Write numbers. ☛ Count objects and write the number. (Up to 9 - 1st Quarter) (Up to 10 - 2nd Quarter) (Up to 20 - 3rd Quarter) <p><u>K.NBT.1</u></p> <ul style="list-style-type: none"> ☛ Make numbers 11 -19 with ten ones and some more ones. ☛ Take apart numbers 11 – 19 to show ten ones and some more ones. • Draw a picture to show ten ones and some more ones. • Write an equation to show ten ones and some more ones. <p>☛ Key Concepts for Differentiation - See p. 8.</p>	<ul style="list-style-type: none"> • and • compose • decompose • digit • eighteen • eleven • equal • equation • fifteen • fourteen • make ten • nineteen • number • number pair • numeral • ones • seventeen • sixteen • ten • thirteen • twelve

Unit of Study 8	Kindergarten	Quarter 3	Approx. 11 days	GSD Math 8/25/14
-----------------	--------------	-----------	-----------------	------------------

Domain: Counting and Cardinality	K.CC
----------------------------------	------

Cluster: Know number names and the count sequence.

1. Count to 100 by ones and by tens.
2. Count forward beginning from a given number within the known sequence (instead of having to begin at 1).
3. Write numbers from 0 to 20. Represent a number of objects with a written numeral 0-20 (with 0 representing a count of no objects).

Cluster: Count to tell the number of objects.

5. Count to answer “how many?” questions about as many as 20 things arranged in a line, a rectangular array, or a circle, or as many as 10 things in a scattered configuration; given a number from 1–20, count out that many objects.

Cluster: Compare numbers.

6. Identify whether the number of objects in one group is greater than, less than, or equal to the number of objects in another group, e.g., by using matching and counting strategies.¹

¹Include groups with up to ten objects.

Math Content Objectives	Vocabulary	Teacher’s Resources and Notes
<p>I can:</p> <p><u>K.CC.1</u></p> <ul style="list-style-type: none"> ○→ Count by ones. (Up to 20 - 1st Quarter) (Up to 50 - 2nd Quarter) (Up to 80 - 3rd Quarter) (Up to 100 - 4th Quarter) ○→ Count to 100 by tens. <p><u>K.CC.2</u></p> <ul style="list-style-type: none"> • Count forward from any number. 	<ul style="list-style-type: none"> • compare • count • digit • eight • eighteen • eleven • fewer • fifteen • fifty • five • four • fourteen • greater than • larger • less than

Unit of Study 9	Kindergarten	Quarter 3	Approx. 15 days	GSD Math 8/25/14
Domain: Geometry				K.G
Cluster: Identify and describe shapes (squares, circles, triangles, rectangles, hexagons, cubes, cones, cylinders, and spheres).				
2. Correctly name shapes regardless of their orientations or overall size.				
Cluster: Analyze, compare, create, and compose shapes.				
4. Analyze and compare two- and three-dimensional shapes, in different sizes and orientations, using informal language to describe their similarities, differences, parts (e.g., number of sides and vertices/“corners”) and other attributes (e.g., having sides of equal length).				
6. Compose simple shapes to form larger shapes. <i>For example, “Can you join these two triangles with full sides touching to make a rectangle?”</i>				
Math Content Objectives	Vocabulary	Teacher’s Resources and Notes		
<p>I can:</p> <p><u>K.G.2</u></p> <ul style="list-style-type: none"> Name shapes. ☛ Name shapes that are turned in different ways. <p><u>K.G.4</u></p> <ul style="list-style-type: none"> Compare two-dimensional and three-dimensional shapes. ☛ Tell how shapes are alike or different. <p><u>K.G.6</u></p> <ul style="list-style-type: none"> Put shapes together to make new shapes. Put shapes together to make bigger shapes. <p>☛ Key Concepts for Differentiation - See p. 8.</p>	<ul style="list-style-type: none"> alike attribute circle compare compose curve different flat hexagon rectangle same shape side sides of equal length sort square triangle two-dimensional shape vertex (plural - vertices; “corners”)
